Internship

SubmittedTo:

Ms. Rani Kumari,

School of ComputerScience and Engineering

IILM University, Greater Noida, U.P

In partial fulfilment of the requirement of degree of

B.Tech CSE

By

SATYAM SHARMA

CS-23411124

Batch:2026-27

CANDIDATE'S DECLARATION

I, Satyam Sharma, hereby declare that this internship report has been prepared as part of the academic requirements for the Bachelor of Technology in Computer Science and Engineering. The report presents my internship experience at EscapeMob, where I completed a two-month internship as a Full Stack Developer from 1 June 2026 to 1 August 2026.

The report is based on the work and experience represented by my internship completion certificate. I have attempted to present the internship activities accurately and have not intentionally misrepresented the organization, role, duration, or nature of the work.

Signature 
Student Name : Satyam Sharma
Roll No. : CS-23411124

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to EscapeMob for providing me with the opportunity to undertake a two-month internship as a Full Stack Developer. The internship provided valuable exposure to practical software development and web application development in a professional environment.

I am thankful to everyone who supported and guided me during the internship. The experience helped me strengthen my technical understanding, problem-solving approach, and professional discipline while working on full-stack development tasks. I also express my gratitude to my university, faculty members, and family for their continued support and encouragement throughout this learning experience.

Signature 

Student Name : Satyam Sharma

Roll No. : CS-23411124

4. PROJECT / INTERNSHIP DESCRIPTION

4.1 Introduction

This internship was completed at EscapeMob in the role of Full Stack Developer from 1 June 2026 to 1 August 2026. According to the completion certificate, the internship involved work on full-stack development tasks and web application development. The certificate also records the demonstration of technical skills, problem-solving abilities, dedication, and professionalism during the internship.

The purpose of this report is to document the internship experience in an academic format, covering the development context, objectives, scope, development approach, and learning outcomes.

4.2 Organization Profile

Organization Name: EscapeMob

Internship Role: Full Stack Developer

Internship Duration: 1 June 2026 – 1 August 2026

Nature of Work: Full-stack development tasks and web application development

The internship was carried out in a professional software-development setting, with the work centered on practical development activities. The supplied completion certificate does not specify a particular product name, project title, database, framework, or programming language; therefore, those details are intentionally not invented in this report.

4.3 Work / Problem Context

Full-stack web application development requires multiple layers of software to work together. A typical development task may involve implementing application interfaces, connecting them to server-side logic, handling data, integrating application services, and testing the complete flow.

Within the context supported by the certificate, the internship provided practical exposure to full-stack development and web application development. The central development challenge can therefore be framed as building and improving functional web applications while maintaining technical correctness, usability, and reliable application behavior.

4.4 Objectives

- I. Apply full-stack development concepts in a practical professional environment.
- II. Contribute to web application development tasks across the relevant application layers.
- III. Strengthen programming, debugging, testing, and problem-solving skills through practical work.
- IV. Improve understanding of how different parts of a web application work together.
- V. Develop professional habits including responsibility, dedication, communication, and disciplined execution.

4.5 Scope of Work

The scope of this report is limited to the work explicitly supported by the internship certificate: full-stack development tasks and web application development. The internship experience is described at a general technical level because the supplied source-code certificate does not identify individual projects, specific features, repositories, or a detailed technology stack.

The report therefore covers:

- I. Full-stack web application development activities.
- II. Development and integration work performed as part of the internship.
- III. Problem-solving and debugging-oriented development work.
- IV. Technical and professional learning gained during the internship.
- V. Evidence of successful internship completion through the supplied certificate.

4.6 Technologies and Tools Used

The supplied completion certificate confirms work in full-stack development and web application development, but it does not name individual programming languages, frameworks, databases, cloud platforms, or development tools. Accordingly, no specific technology has been attributed to the internship without documentary support.

Area	Documented / Supported by Certificate
Development	Full-stack development tasks
Application Development	Web application development
Technical Skills	Technical skills demonstrated during the internship
Problem Solving	Problem-solving abilities demonstrated during the internship
Professional Skills	Dedication and professionalism

4.7 Full-Stack System Architecture

For academic representation, the internship work can be understood through a standard full-stack application flow: a user-facing web layer communicates with application/server logic, which in turn handles data and supporting services. The exact architecture used at EscapeMob is not specified in the supplied certificate, so the diagram below is presented as a conceptual model rather than a claim about a particular deployed system.

USER / CLIENT	WEB APPLICATION	SERVER / APPLICATION LOGIC	DATA / SERVICES
User interaction Browser / web client	UI and application flow	Business logic APIs / processing	Data handling External services

4.8 Methodology

A practical software-development workflow was used as the academic framework for describing the internship. Since the certificate does not provide a project-specific methodology, the following steps describe the general development process relevant to full-stack web application work rather than claiming a proprietary process used by EscapeMob.

- I. Requirement Understanding: Identify the development task, expected behavior, and application requirements.
- II. Planning: Break the work into manageable development activities and determine the relevant application layers.
- III. Development: Implement and integrate the required web application functionality.
- IV. Testing and Debugging: Check application behavior, identify issues, and correct implementation problems.
- V. Refinement: Improve functionality and reliability based on testing and feedback.
- VI. Documentation: Record relevant work, learning, and completion evidence for academic evaluation.

4.9 Expected Outcomes and Learning

The internship completion certificate specifically recognizes technical skills, problem-solving abilities, dedication, and professionalism. In the context of the documented Full Stack Developer role, the internship provided an opportunity to translate academic programming concepts into practical web application development work.

Key learning areas represented in this report include:

- I. Practical understanding of full-stack development workflows.
- II. Experience with web application development tasks.
- III. Improvement in debugging and problem-solving approaches.
- IV. Exposure to professional software-development practices.
- V. Development of dedication, responsibility, and professional discipline.

4.10 Certificate Evidence

The internship completion certificate confirms that Satyam Sharma successfully completed a two-month internship at EscapeMob as a Full Stack Developer from 1 June 2026 to 1 August 2026. It states that the internship involved full-stack development tasks and web application development, and notes technical skills, problem-solving abilities, dedication, and professionalism.

The original certificate is included on the following page as supporting evidence.
